GAIN Report #GR2013

Greece

Oilseeds and Products

Annual

2002

Approved by:

Ann Murphy

U.S. Embassy Rome

Prepared by:

Stamatis Sekliziotis

Report Highlights:

Total 2001 oilseed production reached 646,000 MT due to increased cotton and sunflower seed production. Imports of soybeans increased 25%, but U.S. imports dropped to 120,000 MT. Hi-pro SBM imports are increasing due to the MBM ban. The crushing sector is expanding to meet fishery sector demand but beans and meal imports are expected to be dominated by lower cost supplies from South America. Also, importers prefer non-GMO soybeans to avoid a "contains GMO" label in consumer products.

SITUATION AND OUTLOOK

Total oilseed production (cotton and sunflower) for 2001 is reported as 683,000 MT (646,000 MT in 2000), slightly up from 2000 due to increased cotton seed production in particular, after a large cotton crop harvested in 2001. Output for 2002 (cotton and sunflower) production is estimated to decrease to 585,000 MT, as cotton acreage should return to normal. Despite lower production of oilseeds, total crushing in Greece increased in 2001 to approximately 829,000 MT (cottonseed, soy beans and sunflower), due to larger imports of soybeans and sunflower to meet increased demand. Total crushing in 2002 is expected to decrease to 793,000 MT due to expected drop of cottonseed production in 2002. The demand for protein meal by the white meat production industry (pork, poultry and fish) due to the ban on meat and bone meal (MBM) and a slight but steady increase in vegetable fat use by the hydrogenation industry and the institutional cooking sector, will keep the demand of the crushing industry at a stabilized minimum level of 800,000 MT per annum (plus or minus 5%).

Over the past five years, cotton production has increased at the expense of other irrigated field crops, due to its higher returns. Consequently, the availability of cotton seed has increased. In 2001, the GOG and farmer organizations did not reach an agreement to try to limit cotton crop acreage to approximately 398,000-399,000 Ha to ensure that production stays within the EU quota and that farmers receive the full EU subsidy without corresponsibility penalties. Acreage is expected in 2002 to return to normal levels, after the low prices received by cotton farmers during the last season.

Total domestic consumption of protein meals (soybean, sunflower and cotton) in 2002, is expected to reach 610,000 MT compared to 585,000 MT in 2001 and 577,000 MT in 2000, in light of the MBM ban. Until MY 1996-97, Greece used to import 30-35,000 MT of MBM and produced domestically another 5-10,000 MT making total usage by the livestock and fishery sectors about 40-45,000 MT. This amount now is completely replaced by vegetable meals. Because of the ban, and the consumer's shift towards white meat consumption resulting from the BSE crisis, soybean meal (SBM) use is expected to rise by about 10%-15% per annum in the near future. (Note: Greek poultry and pig producers and feed compounders are gearing up to improve and modernize their operations and practices as demand shifts away from red meats.) Specifically, most of the large poultry plants and more advanced independent feed mills want high protein vegetable meal. According to feed traders/producers, the cost of feeds has risen by almost 8% this year partly due to the fact that integrated companies can no longer use their own MBM production (particularly those poultry and pork meat producers who have their own rendering facilities).

Greece is the largest seabass and seabream producer in the EU with production in 2000 totaling over 60,000 MT. At present, there are 6 plants in the country which exclusively produce fish meal with a total output estimated at 150-160,000 MT annually. The three main soybean crushers in the country (Soya Mills, Soya Hellas and Agroinvest) are gradually investing in capacity to increase their production of fish meal, which calls for high protein meals. Their total current crushing capacity is estimated at 2,000 MT per day (approx. 450,000 MT per annum).

Full Fat Roasted Soybean Meal production for poultry rations is currently estimated at 25,000 MT annually by one plant (Soya Hellas). A second plant (Agroinvest) is planning to start with a production of 15-20,000 MT within 2002.

Currently, the bulk of imported soybean meal is from Argentina (of a value of U.S. \$ 969.01 million) in the form of low protein meal generally of 44.2% protein, with perhaps one vessel out of five containing product below 44%. Most Greek buyers, however are requesting Hi-pro meal (48% protein). Most soybean meal produced by domestic

crushers is only 44% protein, but the plants are investing to upgrade their facilities to produce Hi-Pro 48% protein meal.

Concerns over biotech products in corn and soybean usage for both human and animal consumption have been growing. Currently, consumer products with a biotech content of more than 1% must be labeled as "containing GMOs". Products less than 1% biotech content do not have to be labeled, but the producer may not call his product "GMO free" unless there are no detectable levels of biotech protein or recombinant DNA.

Soybean oil had a good market position in Greece since its introduction onto the market in late 80s. In recent years however, statistics show a slow decline in local consumption as it is replaced with sunflower seed oil, olive oil and, to a lesser extent, corn oil. One of the main reasons for the decline is that the product is not as price competitive with the other oils because producers have to source higher priced, non-GMO products. Corn oil imports from U.S. are down because they are not considered to be non GMO, when imported unrefined EU countries have replaced this market demand in Greece with non GMO product.

The current SBM price for the livestock farmer, is around 0.30 euros/Kg. Soybean meal import prices in 2000 fluctuated according to quality from 208-280 Euros/MT. Greek crushers sell some low protein SBM to third countries (Cyprus, Romania & Fyrom) at prices near 175-180 euros/MT.

In CY 2000, 244,583 MT of soybeans were imported, of a total value of \$ 49.54 million, of which 49 percent originated from the U.S. with the remaining quantity coming mainly from Brazil, Argentina, Bulgaria and Ukraine. SBM imports for the same period, reached 247,341 MT of a total value of \$ 46.2 million, 85% from Argentina, 13% from US and none from Brazil. Some amounts always are recorded as coming from the EU, some of which may be of U.S. origin.

Since CY 1993, importation of U.S. whole soybeans for crushing has been replaced by large imports of beans from Latin America as well as soybean meal because of its lower final cost (Greek manufacturers have narrow crushing margins). However, U.S. beans are slowly gaining market share thanks to current low soybean prices, seen also as a the result of general over supply.

Sunflower seed production has stabilized at 10,000 Ha in planted acreage with an output of approximately 20,000 MT. To cover local crushing needs for sunflower oil , cooking oil and margarine production, Greece imports sunflower seed mainly from Russia (70-75,000 MT). The sunflower meal produced is mostly consumed domestically with a few exports to the EU. Cottonseed meal is mostly used for sheep and goat rations. Significant amounts of cottonseed for crushing are exported to Italy, Spain, Turkey and Saudi Arabia with total amounts fluctuating from year to year according to the cotton crop harvest. A total of 195,000 MT of cottonseed was sold in CY2000 at a total value of U.S.\$ 22.7 million.

Unfavorable spring weather (wet conditions) in 2002 have resulted in late plantings of the oilseed crops (cotton and sunflower). Production levels are expected to be good, provided that favorable weather prevails until harvest.

Total olive oil output in 2001/2002 reached 380,000 MT, while for the 2002/2003 harvest, olive oil is expected to reach the same level or less, due to losses resulting from snowstorms in January. Total domestic consumption of olive oil fluctuates between 260,000-270,000 MT annually (all uses), while exports in CY 2000 reached 135,000 MT for a

value of US \$ 214 million. About 97 percent of the exports went to other EU member states, with 77% of total exports to Italy, much of which is reprocessed/bottled and re-exported. Olive oil is the leading vegetable oil in Greece for all uses, although it is the most expensive compared to seedoils, followed by corn oil, sun oil, soybean oil and cottonseed oil. Extra virgin olive oil is priced between 4.0-4.5 euros/liter. Organically produced olive oil is priced at 8.2 euros/liter.

Cottonseed oil is very competitive with soybean oil and domestic use has increased to about 2,500 MT in the past five years. Use of rapeseed in the food industry was marginal, but is now strongly expanding due to the pressure to replace soybean and corn oils in many products. Rapeseed for Greece is seen by manufacturers as an interesting alternative due to its competitive price and the fact that it can be easily sourced in Europe or the Black Sea area.
